REVOLUTION ON THE ROOF

System of Modular Flashings **MOD**

One manufacturer, one system – new finishing options for every roof!

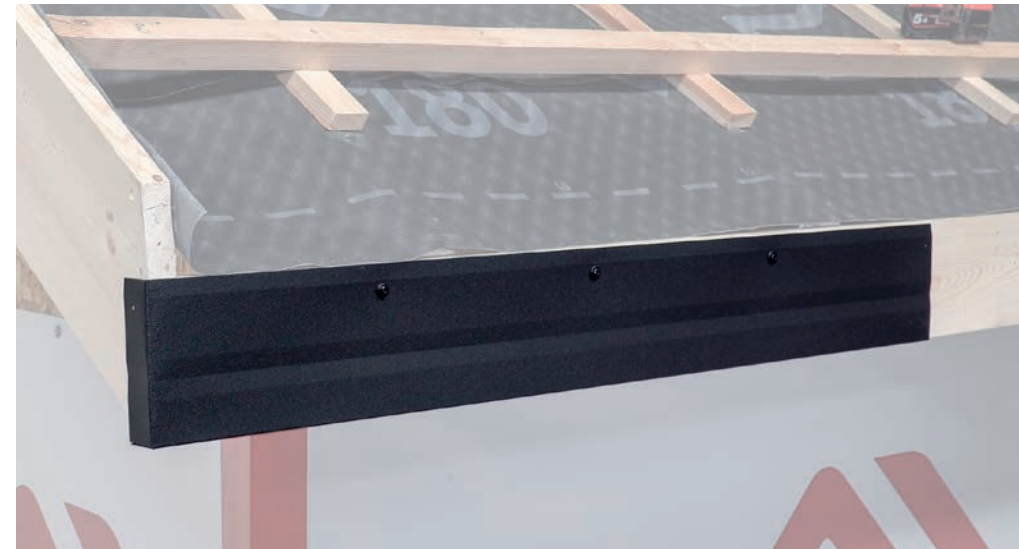

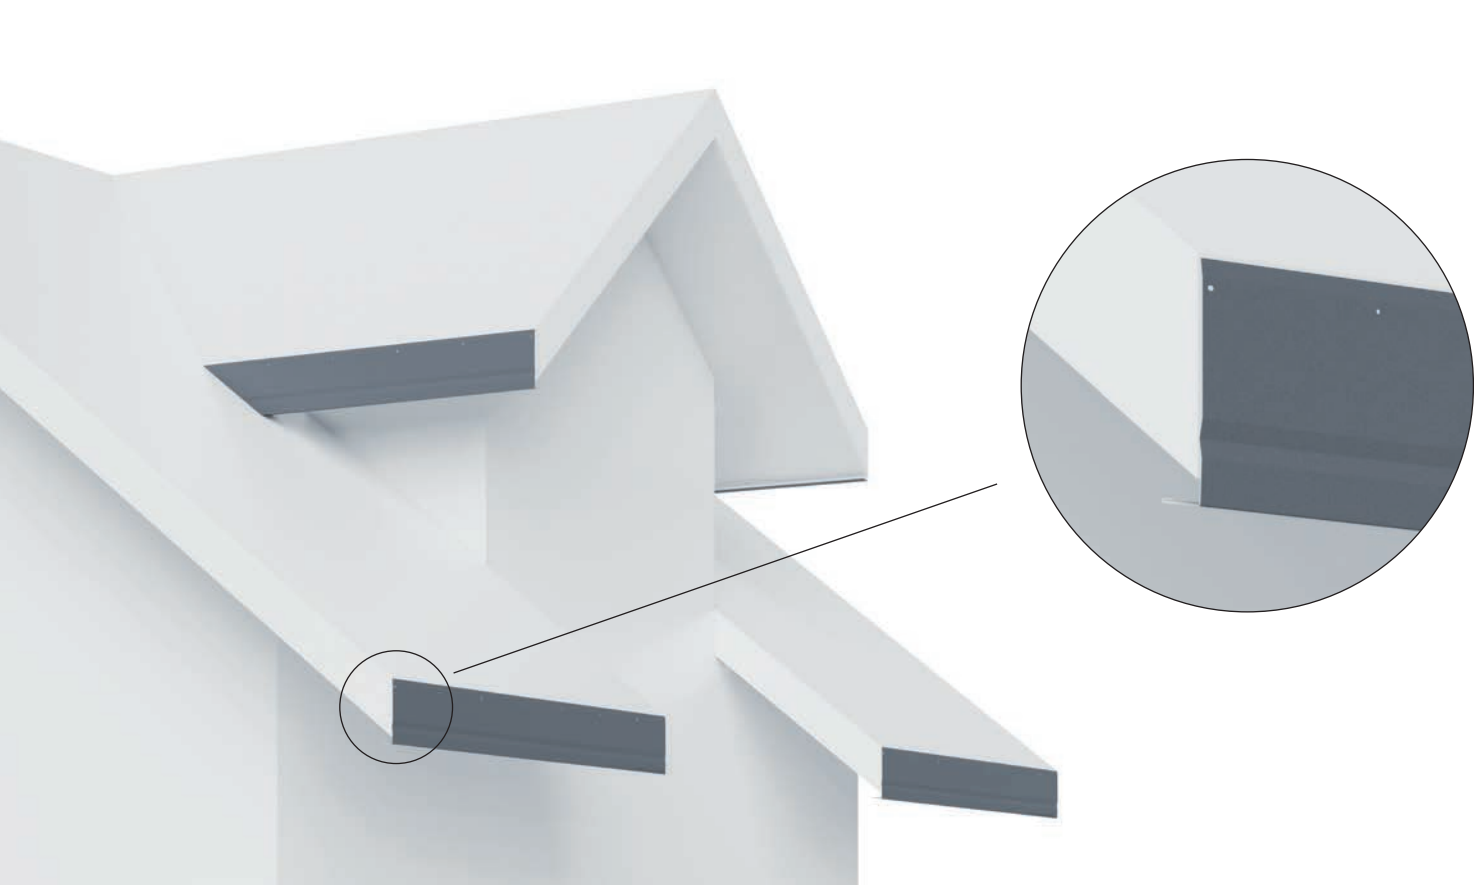

Roofs are our passion, which is why we boldly reach for new technologies to give customers the best quality solutions and make their dream of a perfect home come true. As the first on the market, we have introduced to our offer a universal, complete Modular Roof Flashings System MOD, providing a perfect roof finish, reducing assembly time and guaranteeing its durability and unique aesthetics.

In the MOD System, we have applied solutions which give not only an aesthetic but also technical advantage with an innovative system of joining flashings and their fixing. Thanks to the modern machine park, we have created the highest quality system dedicated to various types of roofing.

All elements are made of Swedish and German steel (SSAB and ArcelorMittal steelworks) to make the roof complete. Thanks to the solutions used, the MOD System has many advantages, such as quick and easy assembly by one employee, repeatability of workmanship, hidden screws, guarantees on every element, elimination of assembly errors, easier transport, innovation and quality of products. In addition to the exceptional level of aesthetics and originality of the roof, we also gain the certainty of a carefully made roofing - without scratches, metallic filings or mismatched elements.

At a time when investors are counting on solutions which are easy and quick to assembly, and at the same time extremely aesthetic, we simply meet them - we give ready-made and perfectly matching finishing accessories for every type of roofing - Modular Roof Flashing System MOD. The investor receives everything the roofer needs to make a beautiful, durable and safe roof.

The MOD System has received the Technical Recommendation of the Building Research Institute.

New
in offer

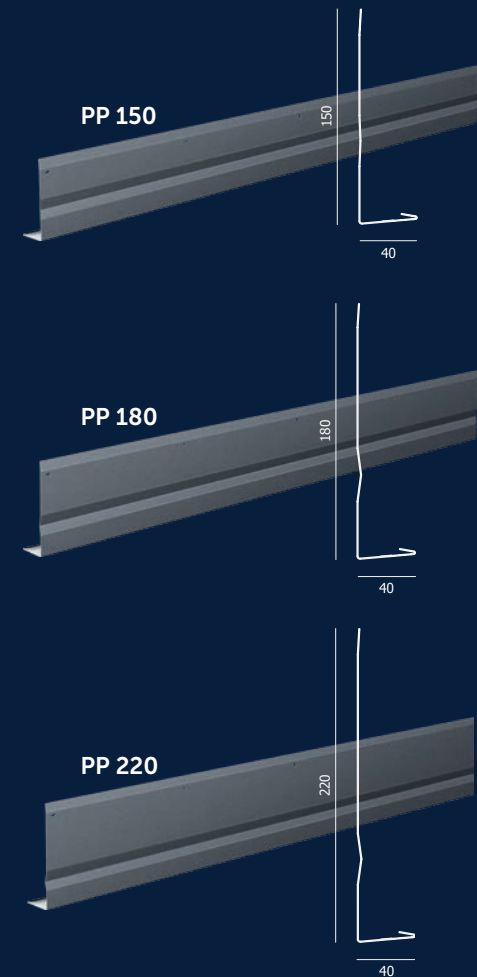

The **MOD** System Verge trim PP 150, PP 180, PP 220

Eaves board protection element.

Features and references

- A** • Innovative system of sliding joints – our flashings have been designed in such a way that the joints slide into each other making them really well-fitted.
- B** • A one person assembly – Flashings dimensions length = 1200 mm and ready mounting holes allow a one person assembly.
- C** • Possibility of additional adjustment during assembly – longitudinal mounting holes allow additional adjustment after initial screwing of the flashing.
- D** • Stiffening bends – a number of stiffening bends prevent the rippling of the flashings.
- Various heights of the verge trim allow it to be properly fitted to the fascia.
- Guarantee of compatibility and colour consistency of all elements of the MOD System.
- The high quality of the material and the precision of the product guarantees a perfect, durable, tight and exceptionally aesthetic roof finish.
- The element can be dismantled and reinstalled without damaging it.
- It is an integral part of other roof flashings.
- It can be used for various types of roofing.

The **MOD** System Eaves flashing PN 80, PN 120

New
in offer

The element leading water into the gutter from the roof.

Features and references

- A** • Innovative system of sliding joints – our flashings have been designed in such a way that the joints slide into each other making them really well-fitted.
- B** • A one person assembly – Flashings dimensions length = 1200 mm and ready mounting holes allow a one person assembly.
- C** • Possibility of additional adjustment during assembly – longitudinal mounting holes allow additional adjustment after initial screwing of the flashing.
- D** • Stiffening bends – a number of stiffening bends prevent the rippling of the flashings.
- The element can be dismantled and reinstalled without damaging it.
- The possibility to choose the right size of the eaves flashing (height 80 and 120 mm) allows it to be fitted to most roofs.
- High quality of material and precision in making the product guarantee perfect, durable and exceptionally aesthetic roof finish.
- Guarantee of compatibility and colour consistency of all elements of the MOD System.
- It is an integral part of other roof flashings.
- It can be used for various types of roofing.

The **MOD** System Valley gutter RKS 25

New
in offer

The element is installed at the point of concave contact of adjacent roof slopes. It drains water from the roof basket into the gutter.

Features and references

- A** • Tightness at critical points – a number of mounting holes have been used to enable assembly with clips. This solution allows for the installation of the flashing without having to make holes in the drainage plane.
- A one person assembly – Flashings dimensions length = 1200 mm and ready mounting holes allow a one person assembly.
- B** • No stress on the joints – one end is narrower, so that there is no stress when overlapping the flashings.
- Guarantee of compatibility and colour consistency of all elements of the MOD System.
- The high quality of the material and the precision of the product guarantees a perfect, durable, tight and exceptionally aesthetic roof finish.
- The element can be dismantled and reinstalled without damaging it.
- It is an integral part of other roof flashings.
- It can be used for various types of roofing.
